KEVIN DONOVAN

119C Cole St., Chapel Hill, NC 27516
(315)727-3603 ⋄ kmdono02@ad.unc.edu

EDUCATION

University of North Carolina at Chapel Hill *August 2015 - Present*
PhD in Biostatistics
Department of Biostatistics
Gillings School of Global Public Health

Syracuse University *January 2013 - May 2015*
B.S. in Mathematics GPA: 3.962
B.S. with Distinction in Economics

OBJECTIVE

Leading statistical analyses and teaching statistics in a collaborative setting, along with the development of methods for analyzing spatio-temporal data. I am interested in analyzing associations between spatial locations and how these may change across time for geographical and brain imaging data.

RESEARCH INTERESTS

Spatial Data Analysis
Time Series Analysis
Brain Imaging Data Analysis
Network Analysis
Statistical Signal Processing
Causal Inference
Machine Learning

EXPERIENCE

Research Assistant *March 2018 - Present*
Carolina Institute for Developmental Disabilities

- Development of algorithms for early prediction of Autism Spectrum Disorder using behavioral data with random forests and support vector machines using R.
- Development of a set of tutorials detailing the use of R software for data management and data analysis.
- Direct collaboration with scientists writing statistical analysis and results sections in published manuscripts. Further duties included data management using R, writing code in R for all corresponding statistical analysis, and creation of figures and tables using R.

Teaching Assistant *August 2017 - December 2017*
BIOS 600: Principles of Statistical Inference

- Teaching assistant for introductory statistics class for non-Biostatistics public health graduate students
- Organized and ran lab sessions with 50+ students. Sessions consisted of practice applying statistical principals to real and simulated data using R computing software.
- Graded lab reports, held office hours and review sessions for mid term and final examinations

Research Assistant *September 2016 - May 2019*
Collaborative Studies Coordinating Center (CSCC)

- Under direction of mentor, lead statistical analyses for published research on HIV-positive youth, directly collaborating with investigators across the United States. Responsibilities included data management using SAS and R, writing code in R for all statistical analyses, creation of figures and tables using R, and communicating the results and methods to investigators.
- Development of R package **lodr** containing software to conduct regression analyses when some predictors have a known limit of detection, requiring the use of Rcpp and C++ code. Package made publicly available on CRAN.

Research Assistant *August 2015 - March 2018*
Dr. Michael G. Hudgens

- Developed and published research on methodology for estimating biomarker levels which correspond to a desired upper bound on the risk of disease, with corresponding R code for implementing the methods published on Github.

COURSEWORK

Advanced Probability and Statistical Inference
Linear and Generalized Linear Models
Longitudinal Data Analysis
Statistical Methods in Diagnostic Medicine
Machine Learning
Survival Analysis
Spatial Statistics

COMPUTING EXPERIENCE

R, SAS, C++ and Rcpp, Matlab

DEVELOPED SOFTWARE

2020 Kevin Donovan, Matthew Psioda, Michael Hudgens, and Matthew Loop. R package. **lodr**: Regression with biomarkers subject to limit of detection, 2020. https://cran.r-project.org/web/packages/lodr/index.html

PUBLICATIONS
